

# Videos without Wireless: A Cheat Sheet

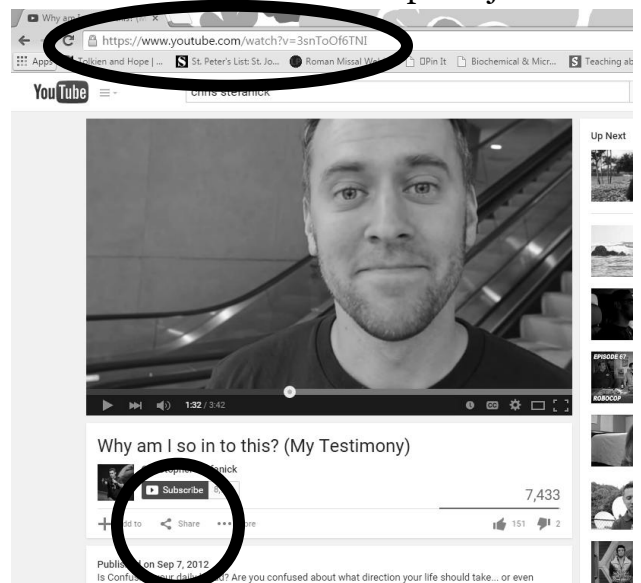

- 1) Find the video you want on YouTube
- 2) Copy the video's link address
- 3) Open a new tab for keepvid.com
- 4) Paste the video's address in the video grab bar
- 5) Hit Download
- 6) Decide which size/type you of download want. In most cases, mp4 is best, and higher quality is better
- 7) Right click the link and choose "save link as"
- 8) Save it somewhere you'll remember
- 9) The video can now be played directly from your computer without Internet access

## Screenshot guide:

- 1) Find the video: search within YouTube, or use a video linked from elsewhere. You can also use Vimeo videos with this process

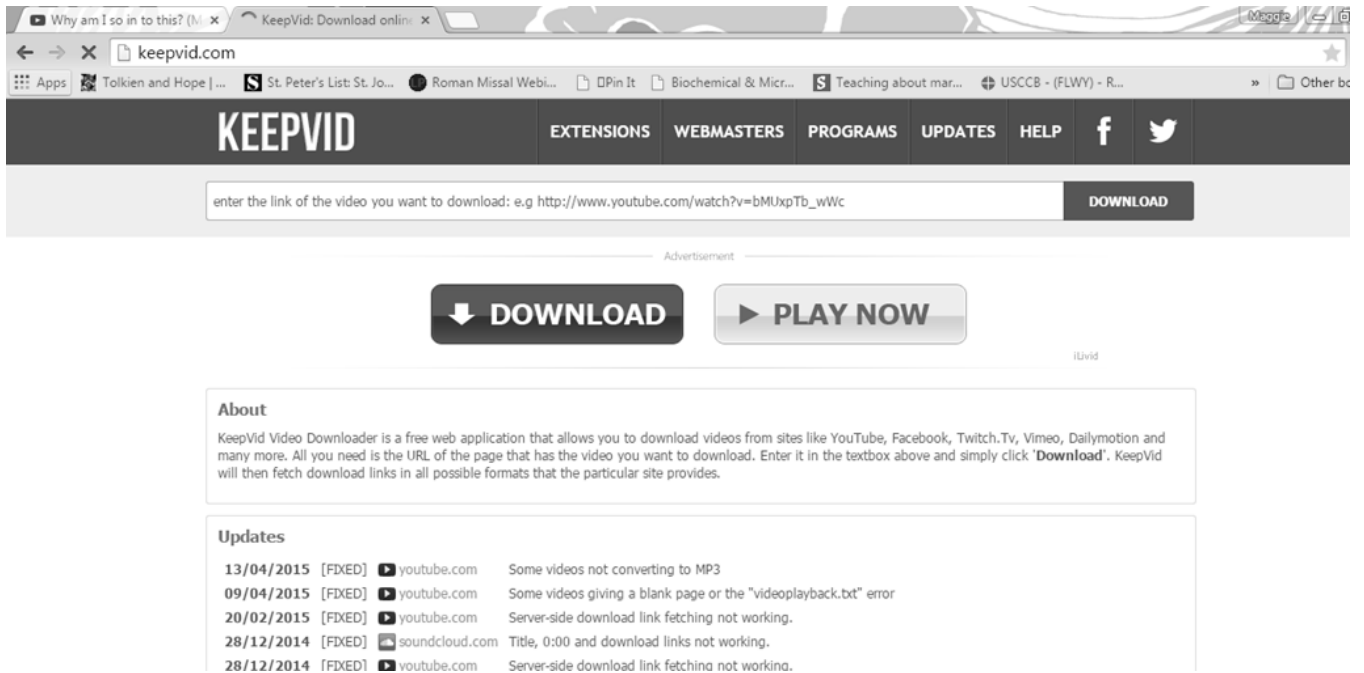

- 2) Copy the address, either from your browser's address bar or from the "Share" option just below

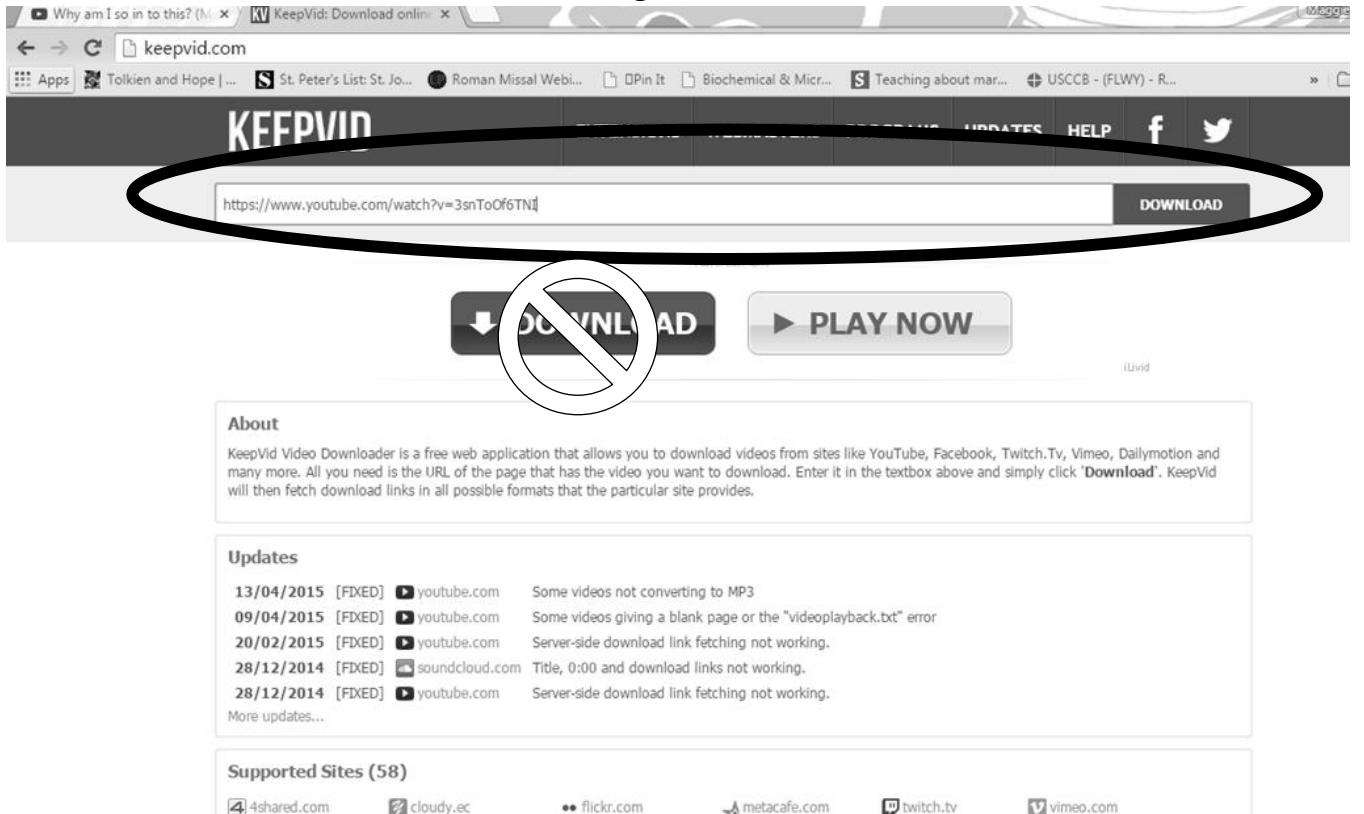

the video itself (which looks like →)

3) Open a new tab for keepvid.com

4) & 5) Paste the video's address into the video-grab bar & hit Download\* (see note!)

\*\*\*Be sure to use the small (indicated above) download button, **not** the big/obvious blue one. The big blue one is an advertisement from another website that will NOT do what you're looking to do.\*\*\*

6) Decide which file type & size you want. Remember, you want (usually) both video and audio, and larger size = better quality. Mp4 is pretty universal – it plays in iTunes, Windows Media player, and other common applications. Avoid the “download” buttons on the right side; they are advertisements.

7) & 8) Right-click to “save link as.” Make sure you put the video file somewhere you’ll remember.

9) Congratulations! Your video is downloaded to your computer and will be available offline. Find the video on your computer and play it when needed.
